Connecting farmers and science

In 2021, the European Union utilised 10.9 million tonnes of fertilisers in agriculture, with a significant portion going to waste, posing environmental threats and economic losses for farmers.

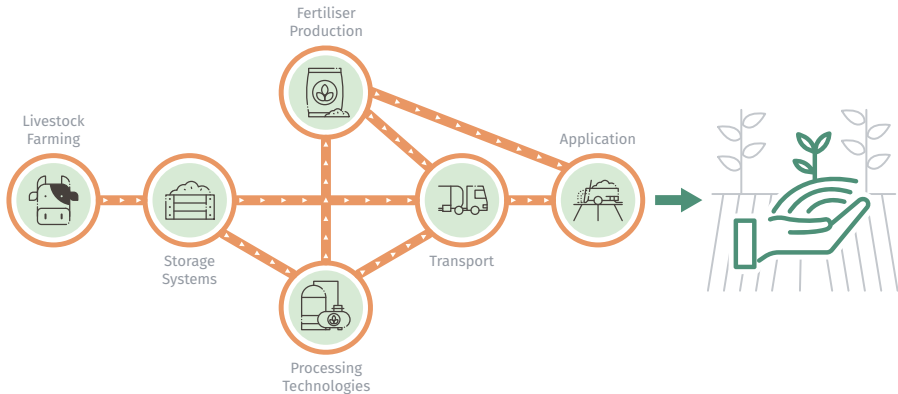

To address this challenge, the NUTRI-KNOW project is committed to disseminating accessible, practical knowledge and fostering a collaborative community. Our aim is to facilitate ongoing knowledge exchange among farmers, researchers and professionals, enabling them to share experiences and find sustainable solutions.

This collaboration will drive the adoption of sustainable agricultural practices, clean technologies, and holistic sustainability.

NUTRI-KNOW in a Nutshell

NUTRI-KNOW aims to improve nutrient management practices in agriculture by establishing an ongoing cycle of knowledge exchange for the benefit of both farmers and the environment.

Holistic Knowledge Exchange: The project recognises the value of diverse perspectives and experiences and encourages a holistic understanding of agricultural challenges and potential solutions.

Practical Application: The project's focus on ready-to-practice knowledge ensures

that the information shared is actionable and relevant to real-world scenarios.

Long-Term Impact: By nurturing a community of practice, the project aims to create a lasting legacy of collaboration and positive change in the agricultural sector.
